

Cybersecurity Ventures* predicts that cyber-attacks will cost the world over 6 trillion dollars yearly 2021, already during 2015 the costs exceeded 3 trillion dollars.

The report also estimates that organizations around the world will be affected by a ransomware-attack every 14 second during 2019. On average 4 million data-sets have been stolen every day since 2013 and over 50 % of the cyber-attacks targeted small- and medium-sized enterprises.

Some statistical examples of what affected targeted companies:

- 64 % web-based attacks
- 62 % phishing and social engineering attacks
- 59 % malware code and botnets
- 51 % Denial-of-Service attacks

*Cybersecurity Ventures, 2017 Cybercrime Report

Ligtis security team have long experience from the software- and hardware industries and are always updated with the latest in IT Security, which gives the team a deep understanding of the interaction between computer hardware and various system interfaces along with the specialized security skills from our distinguished white-hat hackers. The security consultants have completed Firebrans latest CEH certifications and are among the country's leading experts in vulnerability analysis and penetration testing.

Ligti offers customized services which for example prevents cyber-attacks and secures servers, ERP systems, databases, email handling, GDPR compliance and solutions that protects sensitive data from unauthorized persons. Also, lectures are given how institutions and its personnel should act in a precautionary way to optimize security and prevent data theft.
